About Greenlog

Is a neutral intermodal service provider with HQ in Istanbul, Turkey.

The company was established by individuals who have spent long years with major players of the intermodal industry and is specialized in this subject.

The goal of the company is to provide tailor made sustainable logistics solutions by utilizing 45'HCPW containers and linking Europe with Turkey via intermodal corridors.

Is a leading company, specialized in intermodal transport solutions between Turkey and Europe!

With a variety of intermodal corridors we offer different solutions specific to each client needs. Cost efficiency, environmental consciousness, reliability and consistency are the core Elements of our intermodal services.

Due to special agreements with several operators we offer RO-RO + train routes and continental train transport options.

With an unparalleled network coverage, daily departures and transit times as low as 6 days door-door we are redefining the boundaries of intermodal transport in Turkey

Road Freight

Road Freight is still the preferred and most utilized mode of transport between Turkey and Europe.

Flexibility, express transit times and equipment variety are the main attraction points a client chooses this mode of transport.

With an global agency network, strategic partnerships and management of a large fleet of subcontracted trailers we are able to

your needs from Europe to Turkey and further transit shipments to CIS and Middle East countries.

Our wide range of road freight services covers LTL, FTL, project cargo on lowbed trailers & frigo equipment.

For further information and specific solutions please contact our road freight experts.

Sea Freight

If you move large volumes of cargo and fast transit times are not the priority for your supply chain, sea freight is the right mode of transport for you.

With a global coverage strategic capability, special rate agreements due to large handling volumes and space allocations with sea lines, Greenlog brings competitive advantage to your sea freight movements.

With a dedicated team specialized in deep-sea as well as short-sea consignments we are ready to tackle any challenge coming our way.

Please contact your representative at GREENLOG INTERMODAL for further information!

Air Freight

Air Freight is the mode of transport for your time sensitive overnight deliveries.

Due to high consolidated cargo frequency we are able to offer special rates and space allocation to major airports around the world.

For your urgent consignments we also offer overnight deliveries from Istanbul airport all around Turkey with dedicated vans and temperature controlled vehicles (TCV).

Dry ice and on-board carriage are also available for life-science industry. Please contact your customer service representative to learn more about the wide range of interesting services of our airfreight department.

Value Added Services

Warehousing

We offer warehousing specific to your needs in every region in Turkey. Bonded warehouse, storage space for goods in free circulation, cross-docking and storage of empty containers are all part of our warehousing services

Project Cargo

Out of gauge, super heavy cargo, project-based tailor made transport solutions, transport permits & route analysis are all part of services provided by our dedicated team of project cargo experts.

We offer special trailer and container types, heavy lifting, chartering of aircrafts and ships – specifically tailored to your project.

Customs clearance

With direct electronic data exchange link to customs directorate we are able to arrange customs clearance from all customs points in Turkey. Consultancy on customs procedures, taxable base & VAT calculations, import permits and quota regulations based on HS Code tariff are part of customs service department.

Key Elements Of Intermodal Transport

Cost Effective

Intermodal solutions offer the best cost structure for whole supply chain.

Sustainable

Possible to plan annual transportation costs with the prolonged subcontractor agreements.

Reliable

Transit time and easily scheduled shipment plans are the key factors for a reliable system.

Eco Friendly

All solutions in our system saves CO2 and energy compared to existing alternatives.
